

CHI Summary Note

EE

EE's Corporate Responsibility manager and representatives from their public sector team met with the CHI at the last round of supplier meetings. We discussed the need for affordable mobile internet options as an alternative to fixed broadband for some residents. EE are working with a number of CHI members to work up two pilots; testing the popularity of EE 4GEE WiFi devices (MiFi's) with 3 months of data offered at a discounted price to social housing residents, and testing the impact of housing associations buying these directly for a group of residents
